

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	SWTID-2026-7028
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Open UI Policy Actions	Go to the High Impact Control UI Policy created earlier. Scroll down to the UI Policy Actions related list to define specific behavior of fields when policy conditions are met.
FR-2	Create New Action	Click New to create a UI Policy Action. Configure how individual fields behave when the UI Policy is triggered.
FR-3	Fill Action Details	Field name: Urgency (Select Urgency field on Incident form) Read-only: true (Check to make Urgency read-only when Impact = High) Visible: Leave as is (Field remains visible on the form)
FR-4	Submit Action	Click Submit to save the UI Policy Action. Link action to High Impact Control UI Policy to automatically apply to Urgency field.
FR-5	Optional Verification	1. Open an Incident record. 2. Set Impact field to High. 3. Check that Urgency field becomes read-only. 4. Change Impact to confirm field reverts back.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Ensure UI Policy read-only behavior renders clearly without obscuring field visibility.
NFR-2	Security	Restrict modification of the Urgency

		field when Impact is set to High.
NFR-3	Reliability	Consistently apply field behavior across all Incident form views and user sessions.
NFR-4	Performance	Execute UI Policy dynamic field state evaluation in real-time without form response lag.
NFR-5	Availability	UI Policy rules must remain active across all operational hours.
NFR-6	Scalability	Ensure rule engine supports additional field action conditions seamlessly.
