

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	31 January 2025
Team ID	
Project Name	
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per table 1 & table 2.

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	Incident form UI with UI Policy Action triggers for field controls.	ServiceNow Form Engine / Client Scripts
2	Application Logic-1	Open UI Policy Actions: Access High Impact Control UI Policy and navigate to UI Policy Actions related list.	ServiceNow UI Policy Engine
3	Application Logic-2	Create New Action: Define specific field behavior rules on UI Policy trigger.	ServiceNow Platform Core
4	Application Logic-3	Fill Action Details: Set Field name = Urgency, Read-only = true, Visible = unchanged.	ServiceNow Data Dictionary / Field Policies
5	Application Logic-4	Submit Action & Link: Save UI Policy Action and bind dynamically to Impact = High condition.	ServiceNow Relational Engine
6	Verification & Testing	Optional Verification: Test Incident form when Impact = High to confirm Urgency becomes read-only and reverts when changed.	ServiceNow Automated Test Framework (ATF)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Usability	Ensure Urgency field remains clearly visible while being set read-only.	ServiceNow UI Rendering Engine
2	Security	Enforce read-only restriction when Impact condition evaluates to	Role-Based Access Control / UI Policies

		High.	
3	Scalability	Extensible policy rules to support additional fields across Incident management forms.	ServiceNow Platform Architecture
4	Performance	Client-side evaluation of UI Policy condition without latency.	JavaScript / Client-side Rule Engine
5	Availability	Active policy enforcement across all active Incident sessions.	ServiceNow Cloud Infrastructure
