

Project Design Phase
Proposed Solution Template

Date	15 February 2025
Team ID	SWTID-2026-7028
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	When a ServiceNow Incident has High Impact, the Urgency should be automatically set to High. Manual updating may cause the required urgency value to be missed.
2.	Idea / Solution description	Create an active onChange Client Script on the Incident table. The script runs when the Impact field changes. If the new Impact value is '1' (High), it sets Urgency to '1' (High) and displays an information message.
3.	Novelty / Uniqueness	The solution automatically connects Impact and Urgency through a Client Script. It reduces the need for manual updating and applies the required value immediately when High Impact is selected.
4.	Social Impact / Customer Satisfaction	It helps ServiceNow users handle High Impact incidents consistently by automatically updating Urgency. This can reduce manual effort and improve the completeness of incident information.
5.	Business Model (Revenue Model)	The solution is a ServiceNow configuration/customization using a Client Script. No separate application or physical product is required; it can be implemented as part of ServiceNow incident-management configuration.
6.	Scalability of the Solution	The Client Script can be extended to other Incident fields or additional conditions as required. Since it operates on the Incident form, the same approach can be adapted for similar automation rules within ServiceNow.
